

1903 MODEL PUMPING AERMOTOR.
R. A. MODEL PUMPING AERMOTOR.

The above illustration shows the working parts of the 8-foot Pumping Aermotor as made in 1903 and later. The parts are similar in all the sizes, but in some cases the numbers vary from the ones shown above. The only difference between the 1903 model and the R. A. model is in the main frame, the main frame of the R. A. model being made up of three parts. This main frame is now used to replace A-2's with solid arms used on the 1903 model. The wheel hub, No. 403, with automatic oiling device, is used on these models, but the shaft is smaller than in the 1899 model, and must always be ordered as No. 303. In ordering, always refer to the list of repairs for that size of mill, and make sure that the description is
