

Built of heavy steel; corner posts are made of stiff steel angles. The belts and girts of the tower are also steel angles, and the whole is tightly braced with flat steel diagonal braces.

Tower has a belt at the ground line and is anchored by a heavy anchor of the same angle steel 5 feet or more in length with a cross foot on each. All parts are rigidly bolted together, and, including bolts, are thoroughly galvanized.

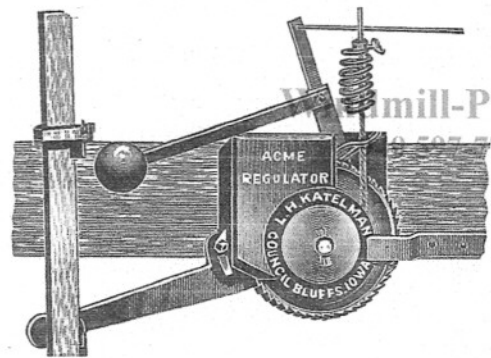

- Girts every 10 feet.
- All complete towers are shipped with pump pole, anchor posts, guides, splice irons and pump attachment.
- 20-Foot, 4-Post Steel Tower.....each \$29.50
 - 30-Foot, 4-Post Steel Tower.....each 40.00
 - 40-Foot, 4-Post Steel Tower.....each 51.75
 - 50-Foot, 4-Post Steel Tower.....each 66.75
 - 60-Foot, 4-Post Steel Tower.....each 86.00
 - 4-Post Stub Tower.....each 2.50

For raising or lowering steel windmill towers. Does away with all side guys and brings tower in position to receive bolts. For 4-post steel towers.

Price, No. 230.....per set \$12.00

Acme Windmill Regulators

This regulator keeps the tank full of water without care or attention. It pulls windmill out of wind when the tank is full, and throws it into the wind when the water level in the tank lowers 5 inches. When the water level is low it releases the sheave wheel and allows the wire rope to unwind. The dog on the lever is held up away from the ratchet wheel and the mill pumps the tank full.

When the tank is filled, the float, by means of the connecting wires, throws the regulator into gear, releasing the dog on the lever, which falls on the ratchet wheel, and is then raised and lowered by the plunger pole, which in turn pumps the ratchet wheel sheave and pulls the mill out of gear.

While the mill pumps, the regulator rests. There is no adjustment required, and it can be attached by anyone in half an hour. There are no springs to weaken, and nothing can get out of order.

Packed 1 in a crate with screws, fixtures and directions. Weight per box, 19 pounds.

Acme Windmill Regulators.....each \$10.00
