

Our new Stover Ratchet Regulator, as shown herewith, like our Ideal Regulator, automatically controls the Wind Mill and Tank supply. Unlike the Ideal, it is fastened high in the Tower, as shown in sketch and clamps to any one of the corner posts on 3 or 4-post steel Towers and wood Towers. With our Ratchet Regulator it is possible to set the Tank at any angle from the Wind Mill Tower.

It is shipped set up, crated, and is stronger, more simple, and more easily attached than others.

No. 1 for controlling 6 to 10 ft. Samson and Ideal Mills; No. 2 for controlling 12 to 16 ft. Samson and Ideal Mills.

FREEPORT, ILLINOIS, U. S. A.

Stover No. 1 and 2 Automatic Ratchet Wind Mill Regulator.
